

Using eye drops following cataract surgery

“After eye surgery, eye drops are prescribed to control post-operation inflammation and prevent infection

Proper application of the prescribed eye drops is the most important thing a patient can do to relieve post-operative discomfort and to prevent complications after surgery”

Dr. Bill Lloyd (Unite for Sight 2016)

Dropper aids - speak to your local pharmacist

Wash hands before and after using eye drops

Check label for storage instructions - not all eye drops need to be stored in the fridge

Follow instructions on label
For example - four times daily
